

Great New Version and Great New Features. . .

Perfect Voice Pinnacle 2.0

Call Record (with Strata CTX)

Call Record enables users to record active phone conversations and save them in their Pinnacle voice mailbox. Pressing an optionally programmed Record feature key located on the telephone prompts the recording of conversations.

The conversations are saved as messages in the mailbox and can be accessed via telephone, Perfect View or even sent to your email inbox as a standard wav file when using Unified Messaging.

Stop recording by pressing the [RECORD] key again. Recording can be resumed or paused by pressing an optionally programmed [PS/RES] key on the phone. Users are able to choose whether the recordings will go into their personal mailbox or an alternate mailbox.

Soft Key Control of Voice Mail

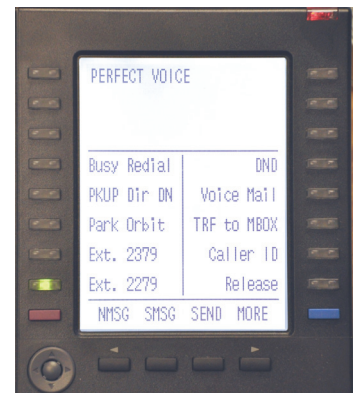

The Liquid Crystal Display (LCD) of digital telephones on the Strata CTX visually displays options within the Pinnacle mailbox menu. Depending on the size of the LCD screen, some or all of the menu options are available by using corresponding soft keys that are located next to the desired option or function.

If the digital phone receives a message while it is idle, the Msg LED is activated and the LCD shows the number of new and saved messages that are currently in the mailbox. If messages are marked urgent, then the LCD will show the numbers of new and urgent messages.

5000 Series Strata CTX (Small Display)

After users login to a mailbox, the LCD will display the mailbox Main Menu options- play messages, send messages, and manage mailbox. Selecting any one of these options will enable a new LCD that displays the next available menu options.
